"In the Mystery of the Genome Cornell University research

John Sanford lifts the rug to see what evolutionary the-

has swept under it. He shows that, not only does Darwin's

not have answers for how information got into the genome,

doesn't even have answers for how it could remain there."

Dr. Michael Behe, Biochemist; Professor of Biological Sciences, Leb-

University; well known author of "Darwin's Black Box".

“The Mystery of the Genome is a brilliant expose of the un-reality of the Primary Axiom

is written in a challenging style, yet is accessible to non-specialists having some mini-

background in biology. At the same time, it has sufficient substance and documenta-
to cause the most highly trained biologist to rethink, in a serious way, what he or she has
always believed about the Primary Axiom. In my opinion, this book deserves to be read
by every professional biologist and biology teacher in the world. To me it has the potential
changing the outlook of the academic world in a profound way.

Dr. John Baumgardner is an expert in complex numerical simulations, and has worked for 20 years in
Theoretical Division of the Los Alamos National Laboratory. He has a PhD in geophysics from UCLA, and a
has an MS degree in electrical engineering from Princeton.

"Dr. Sanford is a highly qualified geneticist from a major university. He has written a tremen-
dous book detailing compelling new genetic evidence that the human genome is de-
riorating, and that it has always been deteriorating – ever since its origin. The profound
implications of these findings should be obvious to any thoughtful person. I believe that
this easy-to-read and wonderfully convincing little volume should be a must-read for concern-
people everywhere."

Dr. Henry Morris. President Emeritus – ICR. Well known author of "The Long War Against God", and approx-
imately 70 other books.

"I strongly recommend John Sanford's Mystery of the Genome, which provides a lucid and
bold account of how the human genome is deteriorating, due to the accumulation of muta-
tions. This situation has disturbing implications for mankind's future, as well as surpri-
implications concerning mankind's past."

Professor Phillip Johnson (Emeritus Law Professor, UC-Berkeley; Law Clerk of Chief Justice Earl Warren of
US Supreme Court; author of "Darwin on Trial" and "Reason in the Balance").

The Cornell University researcher sees what evolutionary theory suggests that, not only does Darwinism information got into the genome, it could remain there."

Professor of Biological Sciences, Lehigh University. He has written a treatise that the human genome is determined since its origin. The profound and thoughtful person. I believe this work deserves to be read by every serious student of science.

To me, it has the potential of becoming a must-read for concerned intellectuals. It provides a lucid and penetrating analysis of the accumulation of mutations and the consequences for the human genome's future, as well as surprising insights into the workings of evolution.
