Supreme Court (see "The Long War Against God").

Genetic Entropy & The Mystery of the Genome J. C. Sanford

# Genetic Entropy & The Mystery of the Genome

Dr. J.C. Sanford

John & Helen Sanford

"In the *Mystery of the Genome* Cornell University researcher John Sanford lifts the rug to see what evolutionary theory has swept under it. He shows that, not only does Darwinism not have answers for how information got into the genome, it doesn't even have answers for how it could remain there."

*Dr. Michael Behe, Biochemist; Professor of Biological Sciences, Lehigh University; well known author of "Darwin's Black Box".*

"The *Mystery of the Genome* is a brilliant expose of the un-reality of the Primary Axiom. It is written in a challenging style, yet is accessible to non-specialists having some minimal background in biology. At the same time, it has sufficient substance and documentation to cause the most highly trained biologist to rethink, in a serious way, what he or she has always believed about the Primary Axiom. In my opinion, this book deserves to be read by every professional biologist and biology teacher in the world. To me it has the potential of changing the outlook of the academic world in a profound way.

*Dr. John Baumgardner is an expert in complex numerical simulations, and has worked for 20 years in the Theoretical Division of the Los Alamos National Laboratory. He has a PhD in geophysics from UCLA, and also has an MS degree in electrical engineering from Princeton.*

"Dr. Sanford is a highly qualified geneticist from a major university. He has written a tremendous book detailing compelling new genetic evidence that the human genome is deteriorating, and that it has always been deteriorating – ever since its origin. The profound implications of these findings should be obvious to any thoughtful person. I believe this easy-to-read and wonderfully convincing little volume should be a must-read for concerned people everywhere."

*Dr. Henry Morris, President Emeritus – ICR. Well known author of "The Long War Against God", and approximately 70 other books.*

"I strongly recommend John Sanford's *Mystery of the Genome*, which provides a lucid and bold account of how the human genome is deteriorating, due to the accumulation of mutations. This situation has disturbing implications for mankind's future, as well as surprising implications concerning mankind's past."

*Professor Phillip Johnson (Emeritus Law Professor, UC-Berkeley; Law Clerk of Chief Justice Earl Warren of the US Supreme Court; author of "Darwin on Trial" and "Reason in the Balance").*
